

UNIVERSAL EXCHANGE HUB

Seafood

WHY CHOOSE US?

Bangladesh Office

Commodity distribution in Bangladesh, Middle East, South Korea, India, USA, Europe and others.

Indonesia Office

Supply of commodities, partnerships with suppliers and farmers

0

Indonesia's fisheries are of global importance

The country's waters support over 3,000 species of bony fishes and more than 850 sharks, rays, and chimaeras. The fisheries industry employs about 12 million Indonesians

1

Indonesian Branch Office

We have a branch office in Indonesia that has a good relationship with fish processors and producers, render it easier to find fish sources.

0

Quality

The quality we provide is export standard, because it is through a strict and experienced fish selection process

2

Partnership

Our partners are experienced in exporting fishery products to many countries.

0

Price

We guarantee the most competitive price because our partners are direct fish producers and producers

05

30

Shipment

We assure prompt shipment with packaging as per customer's request

Keeping together is progress.
Working together is success.

**Office Address: Kp. Parungkuda, RT 05 RW 01, No. 32. Desa Parungkuda,
Kecamatan Parungkuda, Kabupaten Sukabumi, Provinsi Jawa Barat.**

Being the largest archipelagic country globally, with more than thirteen thousand islands, Indonesia is rich in marine resources. Indonesia scores among the top five of fishery and aquaculture producers in the world. Its tuna fisheries are among the largest and most productive worldwide and with its shrimp sector, Indonesia is among the top three producing nations in the world. With the world its fourth largest population – 258 million people – and the 16th largest economy worldwide Indonesia is not dependent on export markets but has a large domestic market for fishery and aquaculture products as well.

The export volume of Indonesian fishery products in March 2020 reached 105.20 thousand tons, an increase of 15.37% compared to February 2020. When compared to March 2019 it increased 4.89%.

This proves that Indonesian fishery products are in great demand by foreign countries, where until now Indonesia has exported fishery products to more than 150 countries. With this great opportunity in the fisheries business, we, **PT Mark Indo Trade**, take this opportunity in collaboration with exporters, processors and fish producers in Indonesia as a bridge in the marketing of fishery products throughout the world.

Size Available: 2000g minimum

Catfish (*Arius Thalassinus*)

The vast ocean that embraces the whole archipelago contains healthy fish and is rich in protein in an unusually abundant amount. Fish species in Indonesia also reached 48.1% of fish species in the world. Various types of fish and shrimp as components of Indonesian fisheries, one of which is *Arius Thalassinus* Catfish / Giant Catfish. The distribution of Catfish in Indonesia covers the western sea waters of South Sumatra, Java, the Malacca Strait, Bali- Nusa Tenggara Timur, Kalimantan, South Sulawesi, North Sulawesi, Maluku and Papua or in other words Catfish in Indonesia foundin almost all coastal waters of Indonesia.

Red Snapper (*Lutjanus Malabaricus*)

Snapper fish is a fish type of seawater that can be found in Indonesian. There are several types of snapper. One type is Red Snapper (*Lutjanus malabaricus*). The reason this fish is called red snapper is because it has red scales. Red Snapper is a type of fish with the highest vitamin content compared to other types of fish. Red snapper almost inhabit all waters in Indonesia. The spread of red snapper starting from the north, namely the Bay of Bengal, the Gulf of Siam, along the coast of the South China Sea and the Philippines. The spread southward reaches the tropical waters of Australia, the westward direction to South Africa and the tropical waters of the American Atlantic, while the east reaches the islands of the Pacific Ocean. While the spread in Indonesia, red snapper is almost throughout the Java sea waters, starting from the Bawean waters, the Karimun Islands of Java and West Kalimantan, the waters of Sulawesi and the Riau Islands. Indonesia is the main producer and an exporter of the snapper fish in the world.

Whole Cleaned (Beak Out , Eyes Out , Ink Out) Ball Type

22 Lbs (13,62 Kg) Per Carton IQF IWP

In addition to tuna, Indonesia has a number of potential marine wealth that has a sale value. One of them is gurita or often called Octopus.

Octopus is a type of mollusk from the class Cephalopoda (animal leg located on the head) and the order Octopoda. This marine animal has a habitat in the area of coral reefs in the deep sea. What's interesting about octopus is the global demand for this animal is quite large.

Indonesia currently occupies the number one export in the world for octopus

Cuttlefish

Cuttlefish are marine animals of the order Sepiida. They belong to the class Cephalopoda, which also includes squid, octopuses, and nautiluses. Cuttlefish have a unique internal shell, the cuttlebone. Every year the demand for cuttlefish continues to increase and Indonesia becomes one of the world's biggest cuttlefish exporters.

Pangasius Fish

Pangasius production in Indonesia has thrived over the past decade increasing from 33,000 tons in 2006 to 437,000 tons in 2016, making Indonesia the 2nd largest pangasius producer in the world. What caused this recent success? It's the combination of growing domestic demand and strong support from the government that is determined to bring pangasius production to the next level. Indonesia has launched a pangasius brand with which it aims to capitalize on growing demand for the farmed fish in Middle Eastern markets. In many countries, aquaculture comes with antibiotics. In Indonesia, pangasius farmers use probiotics. As the word says, 'pro-life'. It means a healthy option for consumers. Besides, Indonesian pangasius is raised in clean groundwater. Indonesian pangasius is farmed in ponds using clean groundwater.

Why Buy Indonesian Pangasius?

1. Indonesian pangasius is raised with probiotics instead of antibiotics
2. Indonesian pangasius is farmed in lower densities and less intensive compared to other supplying countries

Indonesian pangasius are compliant with international food safety requirements. Indonesian pangasius has a low environmental footprint due to efficient conversion of feed.

Size Available: 300g minimum

Milkfish (*Chanos chanos*)

Milkfish is a consumption fish that has been very popular in Southeast Asia. This fish is the only species that still exists in the Chanidae tribe. As a fish consumption, milkfish is a type of fish that has a high protein content, as well as a source of fat, minerals and vitamins needed for human health. milkfish is known to have no cholesterol so it is very good for public consumption.

Milkfish is a sea fish with a very wide distribution area, from the coast of East Africa to the Tua Mutu Island, East of Tahiti, and from South Japan to Northern Australia. This fish is usually found in the Tropics and Sub-Tropics. Milkfish are widely bred in Indonesia, many milkfish ponds are spread throughout Indonesia such as East Java, Central Java, Banten, West Java, Sulawesi, Sumatra, Kalimantan. Indonesian milkfish have been exported to many countries such as South Korea, South Africa, Sri Lanka, Taiwan, Vietnam, Ghana, China, United States, Middle East and many more.

As is known, that Indonesia has many types of marine fish and fish farming which are very popular and have export quality. Beside fish species, Indonesia are also rich in other aquatic products such as **vannamei shrimp, lobster, blue swimming crab, sea cucumbers, seaweed** and also **canned fish , fillet products and many more.**

If you have requests for other types of fish and related products, please do not hesitate to contact us

thank
you

A large, irregular, light blue watercolor-style shape containing the text "thank you" in a white, cursive font. The shape has a textured, splattered appearance with darker blue and white spots. It is positioned in the upper right quadrant of the image, partially overlapping the diver and the fish.
